## 0. REVIEW OF PREREQUISITES

### *Part 1. Pre-calculus Prerequisites*

0.1	Real numbers as points on a line	1
0.2	Pairs of real numbers as points in a plane	2
0.3	Polar coordinates	3
0.4	Complex numbers	4
0.5	Definition and algebraic properties of complex numbers	5
0.6	Complex numbers as an extension of real numbers	6
0.7	The imaginary unit $i$	6
0.8	Exercises	8
0.9	Geometric interpretation. Modulus and argument	8
0.10	Complex conjugates	10
0.11	Exercises	10
0.12	Mathematical induction	11
0.13	Exercises	13
0.14	Necessary and sufficient conditions	13

### *Part 2. Calculus Prerequisites*

0.15	The concept of derivative	14
0.16	Basic properties of derivatives	15
0.17	Derivatives of some elementary functions	16
0.18	Velocity and acceleration	16
0.19	The area problem and the history of integral calculus	17
0.20	Integration as a process for producing new functions	18
0.21	Basic properties of the integral	18
0.22	The exponential function	19
0.23	Complex exponentials	20
